Starbucks History and Positioning

A Coffee Culture

Starbucks Heritage

Every day, we go to work hoping to do two things: share great coffee with our friends and help make the world a little better. It was true when the first Starbucks opened in 1971, and it's just as true today.

Back then, the company was a single store in Seattle's historic Pike Place Market. From just a narrow storefront, Starbucks offered some of the world's finest fresh-roasted whole bean coffees. The name, inspired by Moby Dick, evoked the romance of the high seas and the seafaring tradition of the early coffee traders.

Howard Schultz (Starbucks chairman, president and chief executive officer) first walked into a Starbucks store in 1981. From his first cup of Sumatra, Howard was drawn into Starbucks and joined a year later.

In 1983, Howard traveled to Italy and became captivated with Italian coffee bars and the romance of the coffee experience. He had a vision to bring the Italian coffeehouse tradition back to the United States. It would be a place for conversation and a sense of community—a third place between work and home. He left Starbucks for a short period of time to start his own Il Giornale coffeehouses and returned in August 1987 to purchase Starbucks with the help of local investors.

From the beginning, Starbucks set out to be a different kind of company—one that not only celebrated coffee and the rich tradition, but that also brought a feeling of connection. The Starbucks mission is to inspire and nurture the human spirit—one person, one cup, and one neighborhood at a time.

Today, with more than 31,000 stores in 75+ countries, Starbucks is the world's premier roaster and retailer of specialty coffee. And with every cup, we strive to bring both our heritage and an exceptional experience to life.

The Company

Starbucks purchases and roasts high-quality whole bean coffees. That's the essence of what we do—but it hardly tells the whole story. Our coffeehouses have become a beacon for coffee lovers everywhere. Why do they insist on Starbucks? Because they know they can count on genuine service, an inviting atmosphere and a superb cup of expertly roasted and richly brewed coffee every time.

Expect More Than Coffee

We're not just passionate purveyors of coffee, but everything else that goes with a full and rewarding coffeehouse experience. We also offer a selection of premium teas, fine pastries and other delectable treats. And the music you hear in store is chosen for its artistry and appeal.

It's not unusual to see people coming to Starbucks to chat, meet up or even work. We're a neighborhood gathering place, a part of the daily routine—and we couldn't be happier about it. Get to know us and you'll see that we are so much more than what we brew.

To learn more about Starbucks, explore the company profile at <https://stories.starbucks.com/>

Brewed Coffee

Our Roast is a Philosophy

Tools for this module:

- Drip Coffee Product Card
- Iced Coffee Product Card
- Equipment Product Cards (based on type of equipment training needed)

What you'll learn in this section:

- Coffee-Growing Regions
- Growing, Harvesting and Processing Coffee
- Roasting Coffee
- Coffee Buying
- Brewing and Tasting Coffee
- Iced Coffee
- Brewing Equipment

Coffee-Growing Regions

There are three primary coffee-growing regions, each distinct in its landscape, its climate and the flavor profile it gives to the coffees grown and processed there. Starbucks coffee buyers travel across the global coffee belt to buy the very best green coffee each region has to offer. They carefully select coffees with flavor characteristics that define these regions.

Starbucks Buying and Green Coffee Quality teams work together with suppliers who understand what flavor profiles Starbucks requires from each region. This allows suppliers to provide a variety of coffees from a specific country to meet Starbucks' needs.

- Refers to coffee-growing regions of Mexico and countries in Central and South America
- Crisp acidity with flavors of nuts, cocoa and soft spice
- Pike Place® Roast is a Latin America blend

- Home of some of the most exotic coffee flavors
- Lush and juicy, with flavors of floral and citrus from berry and spice
- Kenya is an African coffee

- This vast region has a wide range of climates, topographies and coffee qualities
- Full-bodied and syrupy smooth with herbal, earthy flavors
- Provides body and complexity for many Starbucks signature blends like Caffè Verona®

- Starbucks blends rely on buying the world's best coffees and combining them to achieve an interesting mix of flavors and aromas
- Espresso Roast is a multi-region blend

Growing, Harvesting and Processing Coffee

Growing Coffee

- The average coffee tree produces enough cherries each season to yield roughly 1 pound of roasted coffee.
- Roughly 5 pounds of coffee cherries are required to produce 1 pound of green coffee.

There are two commercially significant coffee species: *Coffea arabica* and *Coffea robusta*. Starbucks® purchases only the finest, high-altitude *arabica* coffees available. These high-quality *arabica* coffees flourish at altitudes of 3,000 feet and above. The flavor of these beans develops fully through the Starbucks roast.

Harvesting Coffee

During the harvest season, coffee trees become full with bright red coffee cherries. Ripe cherries are slightly larger than a blueberry. The green (or unroasted) coffee bean is the pit, or seed, of the coffee cherry.

There are five layers that surround the coffee bean.

- The outermost layer, the **skin** of the coffee cherry, is thick with a slightly bitter flavor. The
- next layer, the **fruit**, is sweet. The texture of this layer is similar to that of a grape.
- The next layer is the **mucilage**. This thin, slippery, honey-like layer covers the **parchment** layer.
- The **parchment** serves as a protective layer for the coffee bean.
- Removing the **parchment** reveals two bluish-green coffee beans that are coated with a very thin layer called the **silverskin**.

While most coffee cherries contain two beans, 5 to 10 percent of all cherries contain only one bean. This is called a peaberry—a round-shaped bean that forms when one of the two flat-sided beans in the coffee cherry fails to grow. The remaining small bean assumes a rounded pea shape.

Processing

Processing is the term used to describe how the beans (seeds) are removed from the coffee cherry. Processing plays a part in overall flavor, acidity and body.

1. **Washed Process:** Pulp is mechanically removed, leaving a sticky layer called mucilage on the bean. Beans are washed and then held in a concrete fermentation tank for 18–36 hours to develop flavor, acidity and body. One final washing, and the beans are dried, parchment is removed and the green beans are sorted and graded.
2. **Semi-Washed Process:** Coffee pulp is removed using small hand-pulping machines, and then the coffee is washed and laid out to dry in the sun. After partial drying, parchment is removed and the coffee is laid out again for final drying, followed by sorting and grading.
3. **Natural Process:** Coffee cherries are allowed to dry completely on the bean, letting the bean develop flavors before the skin and parchment are removed, followed by sorting and grading.

Roasting Coffee

The Starbucks roast is not a time, temperature or color—it's a philosophy. We organize our coffees in three roast profiles: Starbucks® Blonde, Medium and Dark roast. Research tells us that customers use roast to indicate flavor, so these profiles help them quickly find coffees. Our core blends for We Proudly Serve programs are Veranda Blend®, Pike Place® Roast and Caffè Verona®.

- Blonde-roasted coffees have a shorter roast time, lighter body and mellow flavors.
- Medium-roasted coffees are balanced with smooth and rich flavors.
- Dark-roasted coffees feature a fuller body and robust, bold flavors.

FlavorLock™ Packaging

FlavorLock™ Packaging helps ensure the freshness of Starbucks® coffee. The one-way valve in this packaging allows coffee to “de-gas” while limiting the coffee’s exposure to oxygen, light and moisture.

Coffee Buying

We’ve always believed that businesses can and should make a positive impact on the communities they serve. So we set goals in the areas of our business where we can have the greatest impact.

Starbucks’ ethical sourcing commitment to offering the highest quality ethically purchased and responsibly produced coffee, tea, cocoa and manufactured goods, helps to create a better future for farmers and suppliers.

Visit starbucks.com/responsibility to learn more.

Brewing and Tasting Coffee

How you grind, brew and store coffee is as important as the coffee you choose.

Four Fundamentals of Brewing

Proportion

Proportion is the ratio of coffee to water. Proportion allows the proper extraction of the coffee's full flavors—creating a rich, aromatic cup. Using too little coffee makes a bitter cup. Using too much coffee creates an under-extracted cup that has off flavors.

Always follow proper measurement for specific equipment being used.

Grind

The grind determines how long the coffee/water are in contact and how much flavor is extracted from the coffee. A proper grind should be determined by the brew method and ensures that only the coffee's best flavors end up in the cup.

Proper grind for your brewing method delivers only the coffee's best flavors.

Water

Coffee is 98% water, and good-tasting water is essential to a good cup. Full extraction of the coffee's flavor happens between 195° and 205°F. Always brew using a water filter.

Freshness

Think of coffee as fresh produce and protect it from oxygen, light, heat and moisture. Never store coffee in a refrigerator or freezer for daily use as moisture condenses on the coffee and can damage it. Coffee should not be re-heated.

Portion pack coffee should be used immediately after opening.

Brewing and Tasting Coffee

Brewing Fundamentals

1. Make sure server is clean prior to brewing.
2. Pre-heat server prior to brewing.
3. Place filter in brew basket.
4. Pour the entire portion pack into the brew basket; shake to level.
5. Slide the brew basket into the rails until it stops.
6. The green ready light must be on to start the brew cycle.
7. Make sure the pre-heated empty server is under the brew basket.
8. Then, push the start switch.
9. Do not remove the server until the coffee has stopped dripping.
10. Close the lid on the server in order to retain heat.
11. Brewed coffee hold-time standards are:
 - **2 hours** – airpot/shuttles and thermal servers
 - **1 hour** – heated server
 - **20 minutes** – glass pot and coffee press

Enemies of Coffee Flavor

- **Air:** Coffee should not be exposed to air before you are ready to brew.
- **Light:** Prolonged exposure to light can alter the taste of the coffee.
- **Heat:** Prolonged exposure to heat can dry out the coffee.
- **Moisture:** Moisture before brewing will alter the taste of the coffee.
- **Strong Aromas:** Exposure to strong aromas will alter the taste.

Coffee Freshness

"BEST BEFORE" date is normally located on the back seam of most 2.5, 5, 9 and 16 oz. portion pack coffee. This date indicates the expiration date of the coffee and should not be brewed past this date.

An example of "BEST BEFORE" date:

PIKE PLACE - Coffee blend name

CRP079045D0547 05/11/13 – Lot Code & BEST BEFORE date

Activity

Activity #1: Tasting Coffee

Understanding coffee is key in creating enthusiastically satisfied customers. Follow the steps listed above and prepare selected coffee for tasting. When exploring the Starbucks® Roast Spectrum, Blonde, Medium and Dark roasts are the best way to experience the range of Starbucks® coffees.

Coffee Tasting Characteristics

Whenever you taste coffees, compare and contrast them by identifying the four tasting characteristics for each: aroma, acidity, body and flavor.

- **Aroma:** The way coffee smells—could be earthy, spicy, floral, nutty or other. These aromas are directly related to the coffee's flavor.

- **Acidity:** This is a tangy quality or tartness, not the pH level of the coffee. You can feel acidity on the sides and tip of your tongue, similar to when you taste citrus fruit and drinks. Coffees with high acidity are normally described as bright, tangy and crisp. Coffees with low acidity feel smooth and linger on your tongue.

- **Body:** The weight of the coffee on your tongue. Does it feel light or full in your mouth? It's like comparing whole milk to non-fat milk.

- **Flavor:** The way coffee tastes. This characteristic is registered in different parts of the mouth. Citrus, cocoa and berries are just a few flavors you might sense.

Tasting Coffee

Now that you're familiar with the tasting characteristics, you're ready to explore coffees using the four coffee tasting steps. Follow each of these steps every time you taste to appreciate the characteristics of the coffee.

- **Smell:** Always smell the coffee before you taste it. Your nose can detect thousands of smells. Cup your hand over the cup, hold the cup close to your nose and inhale.
- **Slurp:** When tasting coffee it's important to slurp it. Slurping sprays coffee across your entire palate and lets subtle flavors and aromas reach your nose.
- **Locate:** Think about where you are experiencing flavors on your tongue. Is it on the tip and sides? What's the mouthfeel and weight of the coffee on your tongue?
- **Describe:** Now that you've smelled and tasted the coffee, think about how you would describe the experience. Describe the aroma, acidity, body and flavor.

Preparing Iced Coffee

Use the We Proudly Serve Iced Coffee Product Card as a reference as you go through preparing iced coffee training. Iced coffee is a growing and popular trend amongst coffee drinkers across all regions. Offering iced coffee in your operation is very simple and meets your customers' needs.

Starbucks® Iced Coffee Blend is the recommended coffee that should be used when preparing iced coffee. Iced Decaf Americano should be used for customers wanting a decaffeinated option.

Starbucks Iced Coffee standard is brewing double-strength coffee prepared following set process. Pouring hot brewed coffee over ice is not an approved method.

Quality Iced Coffee Tips

- We do not recommend brewing directly into an airpot or other insulated dispenser. Coffee will not cool to proper temperature.
- Allow at least 10 minutes for ice to fully melt into hot concentrate before serving.
- Serve over ice at room temperature or from cooler (refrigerated) to avoid further dilution.
- Shelf life of brewed iced coffee:
 - **12 hours at room temperature**
 - **12 hours refrigerated**

Follow brewing tips as outlined in the Iced Coffee Product Card and prepare accordingly based on type of equipment in your operation.

Serving Iced Coffee

The standard recipe for serving iced coffee includes the beverage sweetened with Fontana® Classic syrup and milk. Recipes vary based on size and optional syrups can be substituted with flavors like vanilla, hazelnut or caramel.

For additional iced coffee recipe options visit nestlecoffeepartnerssl.com.

Brewing Equipment Standards

Refer to specific brewer equipment card based on type of equipment being used in your operation for additional cleaning and trouble-shooting information.

Brewer and Server Cleaning: Daily

- Rinse brew basket and airpot/shuttles with hot water after each brew cycle.
- Wipe around spray head of brewer daily. Do not use soap or abrasives.
- Wipe exterior of brewer daily. Do not use abrasives.

Brewer and Server Cleaning: Weekly

1. Use Urnex® cleaner or similar cleaner once a week in all airpots, shuttles and brew baskets.
2. Pour ½ contents of packet into airpot or full packet for shuttles.
3. Add hot water and soak for 15 minutes.
4. Drain and rinse thoroughly.
5. Unscrew sight glass cap to insert sight glass brush.
6. Insert sight glass brush and move up and down several times to clean.

Tip: Set a timer or write (with an erasable marker) the time the coffee was brewed on the back of the server so you know when to discard the brewed coffee.

Brewed Coffee Hold-Time Standard

- **2 hours** – airpot and thermal servers
- **1 hour** – heated server
- **20 minutes** – glass pot and coffee press

Brewing Equipment Standards

Solutions Lab Water Filter Program

Water touches nearly every facet of your business including carbonated drinks, water, ice, and coffee. At Starbucks, we are constantly evaluating our processes for viability and what's best for our customers in providing a quality Starbucks beverage. With coffee being comprised of 98% water, the quality of the water can directly affect the taste of the coffee you serve your customer.

Enemies of your water:

- Sediment (dirt) clogs filters, adds poor taste and odor, and accelerates lime scale buildup in kitchen equipment.
- Chlorine can cause flat carbonated drinks, poor-tasting coffee and bad-tasting water and ice. It also corrodes equipment and attacks organic ingredients in food and beverages, which reduces flavor.
- Hardness, typically measured in "Grains Per Gallon" (GPG) lime scale, is generally caused by calcium carbonate buildup in kitchen equipment. This reduces the ability to heat by insulating the elements, clogging valves and thereby increasing service calls and reducing kitchen equipment life.

How often should your water filter be changed?

Filter life is determined based on two factors:

- The volume of water passed through the filter
- The condition and content of the water

Work with your Solutions Lab representative to determine how often your water filter should be changed and the process for servicing and ordering replacement filters.

Notes and Questions

Espresso Beverages

Our Roast is a Philosophy

What you'll need for this module:

- Espresso Beverage Standards Product Card
- Beverage Manual to share with team members
- Espresso machine Equipment Card

What you'll learn in this module:

- Espresso overview
- Beverage Standards
- Preparing espresso beverages:
 - Steaming milk
 - Cup marking
 - Beverage calling
- Espresso equipment overview

Espresso Overview

What is Espresso?

- **A Beverage:** Espresso can be served on its own or in a beverage such as a Caffè Latte or Caffè Mocha.
- **A Roast:** Starbucks® Espresso Roast is roasted dark to develop a flavor that is perfect for brewed espresso that brings out the inherent characteristics of the *arabica* coffee beans.
- **A Grind:** Espresso grind is finer than drip coffee in order to create the right extraction.

The Perfect Espresso Shot

- **Crema:** Foamy, light brown topping with a sweet flavor
- **Body:** The middle layer, slightly darker in color
- **Heart:** Dark brown base of the shot
- **Taste:** Sweet and intense with a caramelly, somewhat nutty aftertaste. It also has a noticeable coffee acidity.

Pulling a shot of espresso is the act of forcing hot water under pressure through finely ground coffee—producing a concentrated, aromatic and highly flavorful extract.

Quality Standards

- **Freshness:** Don't grind more espresso than you can use in 30 minutes. A brewed shot of espresso is only "fresh" for 10 seconds and should be incorporated into milk or other ingredients immediately.
- **Grind:** The grind actually determines the time of extraction. If your shots are too fast, then the grind is pebble-like, and the water is passing through too quickly. If your shot times are too long, then the grind is too fine, like sand, and needs to be coarser to speed up the extraction.
- **Tamp:** If you are using a manual machine, set the portafilter on the counter and tamp the grounds firmly and evenly. The firmness of the tamp can adjust shot times by a few seconds.
- **Extraction:** Shots should pull within 18–23 seconds for a manual machine (typically automatic machines extract 3–4 seconds faster) and produce a single shot of 1 fl. oz. or double shot of 2 fl. oz., plus crema. Use a timer to ensure correct times and look for the perfect shot described above.

Espresso Pour Times

- **Fast pour:** The grind is too coarse and the shot will look like water pouring from a faucet. The flavor will be weak and the body will be thin.
- **Slow pour:** The grind is too fine, and the flow of the shot will be inconsistent and it may drip. The flavor will be bitter and over-extracted.

Click icon to watch Espresso Beverage Basics video

Beverage Standards

The quality of beverages you serve is only as good as the components that go into them. Learning and following the shelf life guidelines and beverage component recipes in this module will ensure that you deliver the high quality beverages your customers expect every time they come into your location.

We Proudly Serve Starbucks® recipes use proprietary Starbucks® coffees, Starbucks® non-dairy alternatives, Teavana® teas, Fontana® beverage and other required ingredients (which may be modified at any time by Starbucks in its sole discretion). No other products or ingredients may be substituted.

Shelf Life Standards

The shelf life charts below were created to help ensure health standards and Starbucks® beverage standards are met.

Product	Open Shelf Life
Coffee and Tea	
Brewed Coffee	2 hours
Espresso	10 seconds 7 days whole bean in hopper
2.5 oz., 5 oz., 9 oz. and 16 oz. pre-ground portion packs	Unopened: Expiration date on package Opened: Use immediately
Iced Brewed Coffee	12 hours refrigerated or unrefrigerated
Cold Brew (varies based on preparation)	
Toddy	7 days refrigerated
Cold Brew Concentrate (bottle)	14 days refrigerated
Cold Brew Powder	5 days refrigerated
Teavana® Iced Tea: 1 & 3 gallon brewed	12 hours refrigerated or unrefrigerated
Prepared Beverage Components	
Frappuccino® Blended Beverage: Roast Soluble Coffee	48 hours unrefrigerated/48 weeks unopened
Prepared Starbucks® Whipped Cream	24 hours refrigerated
Other Beverage Ingredients	
Frappuccino® Blended Beverage Product: Syrup Base - Coffee & Crème Strawberry Juice - Crème Vanilla Bean Powder - Crème	30 days opened/43 weeks unopened 5 days refrigerated/16 weeks unopened 7 days opened/26 weeks unopened
Starbucks® Lemonade	7 days refrigerated
Non-Dairy Alternatives: Starbucks® Soymilk Starbucks® Almondmilk Starbucks® Coconutmilk Oatly Oat Milk	7 days opened refrigerated pre-chill for 4 hours prior to use
Teavana® Chai Latte	7 days refrigerated
Starbucks® Matcha Powder	7 days
Fontana® Syrups	30 days opened/52 weeks unopened
Fontana® Sauces - White Chocolate Mocha, Bittersweet, Semi-Sweet, Caramel	14 days opened/26 weeks unopened
Fontana® Beverage Bases - All Flavors	14 days unrefrigerated
Java Chips	7 days opened/1 year unopened
Starbucks Refreshers® Beverage Bases	3 days ambient or refrigerated
Dried Inclusions	5 days

Beverage Standards

Pump Calibrations

It is critical that the correct pump be used with the right beverage ingredient. Pumps have different calibrations and will impact quality and flavor of finished beverages.

Pump	Calibration (per pump)	Usage
White Syrup Pump (use for regular syrups)	.25 fl. oz.	Multiple – order separately
Black Syrup Pump (use for Classic and sugar-free syrups)	.25 fl. oz.	Multiple – order separately
Fontana® Sauce Pump (red pump)	.50 fl. oz.	One time – comes with sauce
Fontana® Beverage Base (blue pump)	1 fl. oz.	One time – comes with base
Frappuccino® Roast Coffee (FRSC)	.45 fl. oz.	Multiple – order separately
Frappuccino® Syrup (coffee & crème)	.74 fl. oz.	Multiple – order separately

White and Black Syrup Pumps

- Plastic syrup pumps are disposable and should be discarded and replaced when they are worn, no longer calibrated, clogged or otherwise unusable.
- Plastic pumps should not be sanitized, run through the dishwasher, or rinsed with water. Sanitizer and water can cause an off-flavor which impacts beverage quality.
- Black syrup pumps should be used for Classic and Sugar-Free syrups at the espresso bar and the blended beverage station.
- White, unmarked syrup pumps should be used for all other syrups at the espresso bar.

Fontana Sauce Pumps (Red)

- These are individual-use pumps and should be disposed of once Fontana® sauce bottle is empty.
- Do not wash and reuse these pumps.

Frappuccino® Syrup Pumps (marked CBS)

- Discard and replace pump if worn-out or no longer functioning properly.
- Plastic base pump should not be run through the dishwasher or rinsed with water.

Espresso Recipe Basics

The chart below shows the cup size, volume, how many shots of espresso and standard syrup, and sauce pumps for each size on most beverages. Always reference the beverage recipe card for official proportions.

Cup/Size	Short—8 oz.	Tall—12 oz.	Grande—16 oz.	Venti (Hot)—20 oz.	Venti (Iced)—24 oz.
Number of Espresso Shot	1	1	2	2	3
Number of Syrup/Sauce Pumps	2	3	4	5	6

*Applies to the majority of hot espresso beverages. See Beverage Recipe Cards for cold espresso beverage build.

Tips For Successful Café Opening & Closing

Café Opening

- Prepare espresso machine. Remove steam wand from pitcher of water and flush/purge by hitting "steam" button. Wipe wand clean.
- Prepare brewers and servers for the day (warm servers with hot water prior to brewing first batch).
- Make iced tea and iced coffee prior to opening.
- Make sure all prepared products are properly marked with expiration date/time. Use date stickers to mark this, refer to the Shelf Life Standards.
- Prepare whipped cream. Apply date sticker to mark expiration date per Shelf Life Standards.
- Be sure refrigerator is stocked with milk. Non-Dairy milk is chilled
- Ensure first batch of coffee is ready prior to opening.
- Ensure you have appropriate sanitizer cloths for counters and a separate one for steam wand (store in container marked "Sanitizer" as indicated above).

Café Closing

- Clean all smallwares at each station—as needed.
- Ensure refrigerator is stocked with all milk types—ensure the freshest milk is rotated to the back (FIFO).
- Follow espresso machine cleaning procedures.
- Dispose of all expired product—iced coffee, iced tea, whipped cream, etc. Refer to date stickers that have been applied for expiration dates.
- Wipe down spray heads on brewer.
- Follow proper cleaning procedures based on guidance from your operations—espresso and blended beverage stations.
- Ensure all counters and surfaces are wiped and clean.
- Clean steam wand: Ensure steam wand is flushed/purged first.
- Submerge wand in tall pitcher of water and let it sit overnight.
- Stock cups, lids, sleeves, napkins, etc.
- Empty and rinse out all coffee servers.
- Prepare Cold Brew from Powder as needed at closing and refrigerate over night

Click icon to watch Café Opening video

Click icon to watch Café Closing video

Shelf Life Marking

During espresso and blended beverage station set up, use date stickers for dry erase marketer to help ensure all open bottles of syrups, sauces, beverage ingredients and time sensitive beverage components are properly marked with the expiration date and time based on the Shelf Life Standards listed in this guide.

For example, upon opening a jug of Fontana® Sauce on **Tuesday (6/7)**, you would place a date sticker for **Monday (6/20)**, which is the expiration date for this product- 14 days from opening.

Another example would be upon brewing Iced Tea on **Sunday at 7:30 a.m.**, you would write the expiration time for **7:30 p.m.** on a date sticker for Sunday and place a date sticker on the pitcher lid indicating the shelf life.

Setting Up Your Espresso Station

The setup examples illustrated in this guide are designed to facilitate the correct flow when preparing a hot or iced espresso beverage—from ordering to handoff to the customer.

Following this flow will help ensure consistent and efficient beverage preparation time after time. Your setup should align with how the beverage is prepared on the recipe cards.

#	Reco Qty	SKU	Description
1	1	12420739 12420740	3 section cup holder— 4 section cup holder
2	6	12420825	Wire stacking baskets
3	Varies	12431004 12420671	4 hole syrup rack 5 hole syrup rack
4	4-5	12420893 12421272 12420901	Steaming Pitchers Serving Spoon Thermometer
5	1-2	12420666	Dry Dek tiles for pitchers

#	Recommended Quantity	SKU	Description
6	1	NA	Espresso Machine
7	1-3	12421150	Squeeze Bottles
7	1-2	12420656	Whipped Cream Dispenser
8	1-2	12420740	4 hole: Cups, Lids
9	1	1242071	Sleeve Holder
10	1	12420383	4x4 Plexi
11	1	12420733	Sanitizer container for steam wand towel
12	1	N/A	WPS Starbucks Beverage Manual

Preparing Espresso Beverages

Milk Steaming Standards

- All beverages should be made according to the recipe card build order.
- Using the new steaming pitchers, milk should be steamed for one beverage at a time. Unless requested otherwise, milk should be steamed between 150°F and 170°F. Steamed milk is never returned to the refrigerator.
- Milk that has been out of the refrigerator for more than 30 minutes should be discarded. 2% milk is the default standard for all Starbucks® espresso beverages.
- Milk is only steamed once and not re-steamed.
- When making a child's beverage, the beverage temperature should not be above 130°F. A fresh pitcher of milk should be steamed for each child's beverage.

Steaming the Perfect Milk

Steps	Key Points	Reason Why
1. Pour Milk	Measure to beverage size lines on pitcher	Reduces waste and steaming time
2. Aerate Milk	Fully submerge steaming wand in milk	Ensures quality foam (creamy and dense), proper milk flavor and texture
	Turn on steam wand	
	Lower pitcher until only tip of steaming wand is submerged	
	Once you hear a paper-tearing sound, steam 3–5 seconds (6–8 seconds for cappuccino)	
3. Auto Steam Milk	Set pitcher down	Frees up hands
	Position the steaming wand vertically	Allows swirling motion to create creamy, dense foam
4. Sanitize wand	Exhaust, then wipe the steaming wand	Removes residual milk and prepares for the next milk to be steamed
	Keep steaming wand angled out	

Semi-Automatic Espresso Beverage Basics

Whipped Cream Preparation & Standards

Starbucks Whipped Cream Standards

- Whipped cream dispensers should be refrigerated after each use to maintain the whipped cream temperature at or below 41°F (4°C).
- Before opening and cleaning the whipped cream dispenser, all pressure and whipped cream should be released by pressing the lever until the contents and/or gas have been discharged through the tip.

Using Whipped Cream Dispenser

1. With the nozzle pointed down, place the tip near the edge of the cup.
2. Squeeze the handle and move in a spiral pattern toward the center while continuing to hold the dispenser in a vertical position.

Starbucks Whipped Cream Directions

- 1 gallon of heavy cream equals 8 canisters
- 1 liter of heavy cream equals 2 canisters
- 1 canister yields approximately 13 grande beverages
- Locations exceeding 13 hot, iced or blended beverages daily (all sizes), recommend having 2 whipped cream dispenser on hand for back up.

Major Step	Key Points	Reasons Why
Add 4 pumps of Fontana® Vanilla Syrup	• To whipped cream canister	Ensures accurate amount of flavoring
Pour 16oz Heavy Cream	• To whipped cream canister	Ensures correct volume when measured accurately, reduces waste
Place lid tightly	• Onto whipped cream canister	Ensures correct seal before charging
Charge ingredients	• Place whipped cream charger* into the charger holder and twist the charger onto the dispenser	
Shake	• Four times in the upright position	Begins gas absorption
Place Canister	• On its side • Day dot the bottom of the canister - 24 hrs	Improves quality and yield
Shake	• Eight times upside down prior to use	Improves quality and yield

*Whipped cream chargers are recyclable. Operators should check with their local recycling company or resource for proper disposal.

Whipped Cream Dispenser Cleaning & Sanitation

Frequency: Daily, or when empty

Materials Needed:

- Rubber gloves
- QSR Heavy Duty Multi-Purpose Sink Detergent
- Machine Warewash Detergent

01 –Empty the dispenser

- Press the lever until no contents or gas is discharged.
- Discharge any remaining content in trash can to reduce excess “grease” in the grease trap.
- Unscrew the head and remove the head seal by pulling the inner ring.

01 Empty

02–Unscrew, remove nozzle

- Hold the valve on the blue inside part of the head.
- Then pull the valve out of the head from the inside.

02 Unscrew, remove nozzle

03– Clean

- Clean the head, the nozzle, the valve, the head seal, and the bottle either in the dishwasher or in a three compartment sink.
- Reassemble head for use with bottle.

Starbucks® Beverage Calling & Cup Marking System

This system was created to provide the following benefits:

- A tool for baristas to mark cups based on customers beverage order and ensure clarity of request and delivery of the correct beverage
- Consistent terminology when calling beverages to the barista based on following the same order each time for accuracy and customer satisfaction
- Takes away the need for barista to remember multiple beverages at one time when preparing more than one beverage

Reference "Cup Marking System" section on the next page for a full list of standard IDs for drink calling and marking boxes.

Recommendations

- Cups, including personal and "for here" cups, should be properly identified using beverage identification codes.
- A black permanent marker is recommended to use when handwriting beverage identification codes.

Cups

- All paper cups should be served with a lid secured tightly onto the cup with a sip hole off-center from the seam, unless requested otherwise by the customer.
- The lid should not be touched on the underside or the sip side of the lid around the opening.

Sleeves

- Short water-based beverages should be double-cupped because the cup sleeves do not fit this size. All other cups should not be double-cupped unless requested by the customer.
- A Tall and Grande Americano, hot tea or brewed coffee should include a cup sleeve.
- All hot Venti cups should include a cup sleeve.

Espresso Equipment Overview

The two most common espresso machines provided by Starbucks are Coffee Art Plus, semi-automatic machine, and La San Marco, manual espresso machine. Operators may install a different machine or already have one available. Starbucks isn't responsible for maintenance on this machine and will train as appropriate.

Coffee Art Plus TouchIT

- Pre-programmed to support Starbucks core recipes
- Finesteam Steam Wand – one touch milk steaming.
- Two settings – reg & kid's temp
- Non-dairy milk steaming option
- Digital display

La San Marco

- Manual milk steaming
- Supported by manual espresso grinder and proportioning to pull espresso shots

Click like to watch Manual Espresso Beverage Basics

Regular Quality Tips

- Milk should always be steamed between 150°–170°F
- Shots should be timed regularly and dosage should be tested:

Espresso Machine	Grams per shot	Yield	Calibration Standard
Coffee Art Plus	7 grams – manual machines 8.5 grams – automatic machines	1 shot—.75 oz. 2 shots—1.5 oz.	15–17 seconds (pour time)*
La San Marco	7 grams – manual machines 8.5 grams – automatic machines	1 shot—1 oz. 2 shots—2 oz.	18–22 seconds (use timer)*

*From when you push the start button

- Clean steam wand after each use
- Follow cleaning procedures as outlined on equipment product card

If you're not able to solve problems/issues after using troubleshooting guide on product card, call your approved service provider.

Activities

Now you're ready to practice and prepare making beverages.

Activity 1: Cup Marking

How would you mark the cup for the following beverages? Use the blank boxes below to practice "marking" the cups.

1. Tall Caffè Latte
2. Vanilla Grande Caffè Latte with soy milk
3. Nonfat, no- whip Caffè Mocha with hazelnut syrup, Tall
4. Tall, Sugar-Free Vanilla Caffè Latte, with two shots
5. Grande two-shot Caffè Latte with extra foam
6. Nonfat, iced Caffè Latte, decaf, Tall
7. Tall Caramel Macchiato with soy milk
8. Tall Cappuccino, dry, decaf

Activity #2: Pulling espresso shots

Pulling the perfect shot is an essential skill in preparing espresso beverages. Practice pulling 3 double shots of espresso. Look at the shots, record the time of the shot and taste your shots. How would you describe the look and taste of a perfect shot to a customer?

Observe the appearance. What does a perfect shot of espresso look like?

Smell, taste and discuss the difference in shot quality with your trainer.

Now taste the difference between a fresh shot and one that has been sitting more than 10 seconds. How would you describe the difference in taste, bitterness and strength?

Activities

Activity #3: Steaming the Perfect Milk

Now it's your turn to practice steaming milk. Remember to purge the steaming wand prior to making a drink.

- Follow the proper milk steaming procedures reviewed earlier.
- Pay attention to the sound change in the milk when steaming. As the temperature of the milk changes, the sound should become more muffled than when aerating to create foam.
- Perfectly steamed milk should have a thick layer of dense foam when finished.
- Following the milk steaming techniques you've already learned, practice steaming milk.
- Take note of what you see after you've steamed milk. Do you see large bubbles, no foam or thick, dense foam?

Activity #4: Making Espresso Beverages

As discussed earlier in this module, many variables go into creating the perfect Starbucks® espresso beverage. Now that you've practiced pulling shots and steaming milk, you're ready to create your first espresso beverage.

- Your trainer will demonstrate how to make a selection of hot and iced espresso beverages, including marking the cup and proper beverage calling.
- Use your WPS beverage manual to review recipe. After your trainer prepares the beverage, it's your turn.
- Make any notes around beverage preparation.

Notes and Questions

--	--

Frappuccino® Blended Beverages

Icy-cold blended indulgence

What you'll need for this module:

- Frappuccino® Blended Beverage Recipe Cards
- Frappuccino® Blended Beverage Product Card
- Frappuccino® Blended Beverage Visual Instruction Stickers
- Frappuccino® Blended Beverage Recipes
- All Frappuccino® products and smallwares

What you'll learn in this module:

- Frappuccino® Blended Beverage overview
- Setting up your Frappuccino® beverage station
- Frappuccino® Blended Beverage standards/quality assurance
- Prepare Frappuccino® Roast Soluble Coffee (FRSC)
- Prepare Frappuccino® Blended Beverages
- Smallwares cleaning/handling

Frappuccino® Blended Beverages & Cold Beverage Set Up

The Frappuccino® Blended Beverage is the original, icy-cold coffee indulgence that Starbucks made famous.

The We Proudly Serve Frappuccino® Blended Beverage program offers the following beverages:

- Our most popular Frappuccino® blended coffee beverages—Coffee, Mocha, Caramel, White Chocolate Mocha and Java Chip
- Our most popular Frappuccino® blended crème beverages—Strawberries & Crème, Vanilla Bean, White Chocolate Crème and Double Chocolate Chip
- All flavors are available in Tall, Grande and Venti sizes

Setting up your Cold Beverage Station

First, you'll want to locate all smallwares and products needed to set up and execute Frappuccino® Blended Beverages. This Cold Beverage Station Set Up supports Frappuccino® blended Beverages along with Refreshers® Beverages, Cold Foam and Iced Tea

The image below provides a visual layout of how your station should be set up and the order for products and smallwares. Setting up your station as indicated in the correct order and with the visual instruction stickers provides optimal and efficient beverage preparation. Following this beverage build process will ensure beverage consistency time after time for all cold beverage.

Click icon to watch How to Set Up Cold Beverage Station

Quality Assurance Standards

Date Coding

Date code prepared Frappuccino® Roast and opened containers of bases and syrups with opened shelf life using a date sticker or dry erase pen.

Note: A sharpie can be used to label shelf life on opened syrups and bases.

Blending Standards

- All blended beverages should be made in the correct blender pitcher
- Only one beverage should be blended at a time.
- Blender pitchers and lids should be rinsed after each use.
- Products provided by a customer or any other outside source cannot be added and/or blended into the beverage.

Dairy Pitchers

Because there is shared equipment when preparing beverages, such as steaming wands, wiping cloths and serving utensils, labeling steaming pitchers and blending pitchers does not guarantee and eliminate the risk of allergen cross contact of other dairy in your operation.

The need to label milk steaming pitchers and VitaMix blender pitchers for Frappuccino® blended beverages is not a requirement when preparing beverages. As a standard practice, each beverage should continue to be prepared individually for customers and always use a clean steaming or blender pitcher to make beverages. Both pitchers should be rinsed after every use.

Name Labeling

Frappuccino® Roast pumps, CBS base pumps, blender pitchers, and blender lids will already be labeled, but should be replaced when they are no longer legible.

Proper Storage

- Gallon milk containers and soy should be kept in the refrigerator between active uses. Do not allow to sit on the counter when not in active use to maintain proper temperature.
- Rinse blender pitchers after each beverage and store upside down to drain on a clean drain board.
- Rinse lids and place vertically, top of lid facing out, in front of the blender according to milk type to minimize allergen cross contact.
- Cleaned and sanitized smallwares not in use at the bar should be stored dry and protected from any sources of contamination.
- Lids must be placed on dry inclusion dispensers (vanilla powder) for overnight storage.

Proper Temperature and Milk Handling

- Milk and opened soy must be stored at 41°F (40°F/4°C in Canada) or below to comply with food safety standards and ensure optimum beverage quality.
- Whole milk is the default for Frappuccino® blended beverages.
- Coconutmilk, Soy milk, Oatmilk and Almondmilk must be chilled for 4 hours prior to use.

Quality Assurance Standards

Smallwares and Fixtures in Good Condition

Any items that are chipped, cracked, corroded, otherwise damaged or permanently stained should be replaced, because they are no longer sanitary.

General Sanitation

- All smallwares, except the base and flavor pumps, are dishwasher safe.
- Remove any exposed adhesive on countertops and food equipment/smallwares as it traps soil, prevents proper cleaning and can trap bacteria.

Cold Beverage Quality

Finishing the Beverage

Whipped cream and any additional toppings should be put onto the beverage prior to placing the dome lid on the cup.

Volume

When following proper recipe standards, you will not have any product left in the blender pitcher and beverage will fill the cup.

Texture

The beverage should be thick enough that you have to swirl the pitcher as you pour, but not so thick that you can't pour at all.

Separation

The beverage should be properly blended and poured into the cup within 10 seconds after blending. Allowing the beverage to sit will cause the beverage to begin to separate in the cup.

Ice

When properly blended, there will not be any pieces of ice in the beverage.

Straw

Always hand the customer the straw with their beverage.

Preparing Frappuccino® Roast Soluble Coffee (FRSC)

FRSC is a key component to the coffee based Frappuccino® blended coffee beverages.

- FRSC consists of 100% soluble Starbucks® Espresso and Italian Roast coffee.
- One pouch of FRSC yields approximately 26 Grande beverages.

To make one liter:

1. Measure one liter of cold filtered water into a clean plastic pitcher.
2. Add one package of Frappuccino® Roast.
3. Mix using a whisk until fully dissolved.
4. Label with shelf life (48 hours) and product name.
5. Keep unrefrigerated.

To make more than one liter at a time, mix one liter of water with each package of Frappuccino® Roast in a cube container.

Notes & Questions:

Preparing Frappuccino® Blended Beverages

Click icon to watch How to Frappuccino® blended beverage video

Reference Frappuccino® Product Card for full recipe preparation details.

Drink Calling

Remember to use the full beverage name when calling out the beverage for the customer. The use of “Frap” when referring to Frappuccino® Blended Beverage is not approved. Refer to the recipe card for correct cup marking I.D.

Below are a few beverage calling examples.

Flavor beverage)	Drink Calling (insert customer name after
Mocha	Mocha Frappuccino® Blended Beverage for
Caramel	Caramel Frappuccino® Blended Beverage for
Vanilla Bean	Vanilla Bean Frappuccino® Blended Beverage for

Other Beverage Preparation Options to Review (also on Product Card):

- Decaf Frappuccino® Blended Beverages
 - To make decaf Frappuccino® Blended Beverages, skip Frappuccino® Roast and add 2 shots of decaf espresso in its place.
 - Coffee Frappuccino® Syrup Base must still be added as indicated in Step 5.
- Extra Coffee Frappuccino® Blended Beverages
 - To make extra Frappuccino® Blended Beverage, add 2 additional pumps of Frappuccino® Roast Coffee (FRSC)

Frappuccino® Blended Beverage Products Shelf Life

Product	Shelf Life
Frappuccino® Roast Soluble Coffee (FRSC)	48 hours unrefrigerated / 48 weeks unopened
Frappuccino® Syrup Base	30 days opened / 43 weeks unopened
Fontana® Bittersweet Mocha Sauce	14 days opened / 26 weeks unopened
Fontana® Caramel Syrup	30 days opened / 1 year unopened
Non-Dairy Alternatives: Starbucks® Soy milk Oat milk Almond milk Coconut milk	7 days refrigerated / 36 weeks unopened Refrigerate 4 hours prior to using
Vanilla Bean Powder	7 days refrigerated / 26 weeks unopened
Strawberry Juice	5 days refrigerated / 16 weeks unopened
Fontana® Classic Syrup	30 days opened / 1 year unopened
Java Chips	7 days opened / 1 year unopened

Sampling & Promotional Ideas

Benefits of Active Sampling

- Customers are more willing to purchase a new beverage item if they sample it first.
- Sampling and up-selling improves employees' Frappuccino® Blended Beverages knowledge.
- Sampling can help increase average ticket sales by encouraging customers to add an item to their existing purchase.
- Active sampling creates excitement with guests. Sample to guests in the areas outside of the espresso café, not just at the counter. This draws guests into your operation.
- Provide Frappuccino® Blended Beverage samples to your morning customers, encouraging them to visit in the afternoon for a pick-me-up.
 - In Starbucks retail stores, history has shown that 1 in 5 sampled beverages translates into a beverage sale.
 - To prepare Frappuccino® Blended Beverage samples: Prepare a Grande (16 oz.) Frappuccino® Blended Beverage and divide between 3.5 oz. sample cups. Finish samples with whipped cream and topping (based on beverage you're preparing) and a straw. One Grande yields 4-6 3.5 oz. samples.

Cut a full-size green straw into thirds to use with 3.5 oz. sample cups.

Promotional Ideas

- Talk to customers about the various Frappuccino® blended beverage customization options, i.e. try it with non-fat milk, with soy milk, or decaf.
- Use the provided counter cards to host a Frappuccino® blended beverage Happy Hour. Simply write in the date and time of your Happy Hour and offer half-price Frappuccino® blended beverages for an afternoon.
- Offer customers a treat receipt—a printed or stamped offer on a receipt that encourages guests to come back later in the day for a Frappuccino® blended beverage at a discounted price. Examples: Come back after 2 p.m. and enjoy a Grande Frappuccino® blended beverage for \$2 or BOGO.
 - On average, 80% of blended beverages in Starbucks retail stores are sold after the morning rush, with ~50% sold between 2–7 p.m.
- Encourage afternoon customers who order hot drinks to give Frappuccino® blended beverage a try.
- Bundle Frappuccino® blended beverages with food offerings to help increase average ticket.

Activity

Activity #1: Preparing Frappuccino® Blended Beverages

Once Frappuccino® Blended Beverage station is set up and FRSC has been prepared you're ready to begin making and tasting Frappuccino® Blended Beverages.

- Review Product Card and Frappuccino® Blended Beverage recipes.
- Ensure you follow the visual aid stickers; complete all steps in beverage preparation through customer handoff. This allows you to experience the importance of drink calling and customer connection.
- Prepare blended beverages in this order (time permitted):
 - o Coffee base – make one or two beverages
 - o Crème base – make at least one beverage
- Taste the beverage and describe the flavor and consistency of the Frappuccino®
- Rinse and clean all appropriate smallwares prior to moving to next beverage.

Notes & Questions:

Cold Brew & Nitro Coffee

sweet and smooth

What you'll need for this module:

- Cold Brew Product Card – Using a Toddy® Brewer
- Cold Brew from Concentrate Product Card
- Cold Brew Powder Product Card
- Cold Brew & Nitro Recipe Cards

What you'll learn in this module:

- Cold Brew & Nitro Cold Brew Overview
- Difference between Cold Brew and Nitro Cold Brew
- Preparing Cold Brew using a Toddy® Brewer
- Preparing Cold Brew from Concentrate
- Preparing Cold Brew from Powder
- Preparing Cold Brew & Nitro by the cup

What is Cold Brew Coffee?

The hottest thing in coffee is cold! Cold brew coffee relies on cold water vs. heat for extraction, which allows the coffee to develop a naturally sweeter taste with low acidity and creating a smooth, full bodied handcrafted experience for your customers.

Your customers know and love Iced Coffee as an everyday beverage, but Cold Brew and Nitro Cold Brew are a great opportunity to offer them a uniquely rewarding experience, while also broadening your customer base and reaching a new clientele.

Cold Brew vs. Nitro Cold Brew

COLD BREW COFFEE

- Starbucks Cold Brew Blend is steeped in cool water for 20 hours (or prepared through one of the other approved methods)
- Cold Brew is handcrafted in small batches made on-site in a Toddy® brewer or made using Cold Brew Powder
- We specifically developed Starbucks Cold Brew Blend and Cold Brew Powder to heighten the rich, naturally sweet flavor created during the cold brewing process
- The blend incorporates African and Latin American coffees
- Cold Brew is served over ice
- When dispensed from a keg, nitrogen is used to pressurize the tap but, nitrogen is NOT infused in the beverage

NITRO COLD BREW

- Nitro Cold Brew is our Cold Brew Coffee that is infused with nitrogen
- The nitrogen infusion creates a creamy sweetness you can taste and see
- Nitro Cold Brew is only served out of a tap/draft system
- As it comes out of the tap, the amber-colored coffee cascades down the side of the glass and the tiny bubbles rising to the top are actually the nitrogen bursting out of the Cold Brew
- It's served unsweetened, without ice

Ways to Prepare Starbucks Cold Brew

Starbucks Cold Brew can be prepared through 3 different methods: Toddy Brew, Cold Brew Powder or Cold Brew Concentrate.

Toddy Brew – Cold Brew Coffee:

- Starbucks Cold Brew Blend is steeped in cool water for 20 hours
- Cold Brew is handcrafted in small batches made on-site in a Toddy® brewer
- We specifically developed Starbucks Cold Brew Blend to heighten the rich, naturally sweet flavor created during the cold brewing process
- The blend incorporates African and Latin American coffees
- ***Cold Brew Blend is the only Starbucks coffee approved to prepare Cold Brew Coffee using a Toddy® brewer***

Cold Brew Powder – Cold Brew & Nitro Coffee:

- Starbucks soluble Cold Brew coffee powder delivers the same great café quality tasting Nitro & Cold Brew served in Starbucks retail stores.
- Simply add cold, filtered water to powder, mix, pour into dispenser and serve from our Cold Brew + Nitro Countertop System and enjoy.
- 100% Arabica, Colombian, Café Practices coffee. The taste profile is smooth, mellow flavor with chocolate notes. Pair with lemon loaf or chocolate croissant.
- Cold Brew Powder is the approved product to be served through our countertop system – delivering both cold brew and nitro coffee

Cold Brew Concentrate – Cold Brew Coffee:

- Starbucks Cold Brew Concentrate takes the steeping time out of the preparation and offers a super-smooth cold brew coffee for your operation
- The concentrate is cold-steeped with our custom blend of coffee, offering subtly sweet chocolate notes.
- Concentrate is packaged in a 32oz, add water, mix and serve from 2 liter pitcher.

How is Cold Brew Different from Iced Coffee?

Take a look at the image, it provides a clear distinction between cold brew and iced coffee – cold steeped vs. brewed double-strength is main difference.

Understanding the difference between the two will help you answer any customer questions when they're making their beverage decisions

Cold Brew Preparation in a Toddy® Brewer

Supplies Needed

Yield Chart

Use the table below for guidance on ground coffee and cold filtered water needed based on volume and yield of cold brew you need to prepare

Number of Grande Beverages	=	Cold Brew Coffee Blend	+	Cold Filtered Water (½ over coffee, ½ over filter)	x	Brew in Toddy® Brewer for 20 Hours	=	Cold Brew Concentrate Yield
19 - 16oz Beverages	=	1 - 20oz bag (20oz)	+	4 Liters (135 oz)	x		=	2.75 Liters (93oz)
35 - 16oz Beverages	=	2 - 20oz bag (40oz)	+	7 Liters (236 oz)	x		=	5 Liters (169oz)
55 - 16oz Beverages	=	3 - 20oz bag (60oz)	+	11 Liters (372 oz)	x		=	7.75 Liters (262oz)
70 - 16oz Beverages	=	4 - 20oz bag (80oz)	+	14 Liters (473 oz)	x		=	10 Liters (338oz)

Preparation Steps

1. Add Cold Brew Coffee Blend

- Wash hands and put on food service gloves
- Open filter and place into the dry Toddy® Brewer
- Fill with proper amount of pre-ground coffee

2. Pour 1/2 of the cold filtered water over coffee & tie up filter

- Pour proper amount of cold filtered water into the filter, **ensuring all grounds are wet**
 - Use 2 liter pitcher to measure correct amount of water
- Tie the string in a knot around the filter, leaving 3-4 inches at the top

3. Pour the other 1/2 of the filtered water over filter & let sit for 20 hours

- Pour proper amount of cold filtered water on top of the closed filter. Ensure the filter is completely saturated
- Cover the Toddy® Brewer with the lid and let the coffee brew **unrefrigerated for 20 hours**
 - Do not store Toddy® on floor while brewing
- Date dot (mark with time) the Toddy® Brewer with the brewing end time

4. Prepare to serve

- After 20 hours, transfer Cold Brew concentrate into plastic dispensing pitchers - recommend 2 liter acrylic pitcher
 - Do not lift filter from Toddy® maker – do not squeeze filter, it could tear or burst
- Day dot or mark each container with the 5 day shelf life and place in refrigerator

5. Clean Toddy® Brewer

- Wash, sanitize and dry the Toddy® Brewer.

Preparation by the Cup & Quality Tips

How to Prepare Cold Brew By the Cup – Toddy® Brewed

1. Add Starbucks® Cold Brew concentrate to cup.
2. Add cold filtered water.
3. Fill the cup with ice.
4. Top with flat lid and hand off with proper straw

Note: Starbucks Cold Brew Coffee using a Toddy® Brewer is considered the “Gold Standard” for Cold Brew preparation and serving to customer in WPS Starbucks Espresso locations.

Cold Brew Coffee Quality & Cleaning Guidelines

Quality Tips	Toddy® Cleaning Guide
- See instructions in the Toddy® maker for first time assembly Prior to preparation – fill Toddy® maker with water and make sure the spigot is sealed tight to avoid leaks Ensure Toddy® maker is clean and dry before each batch is brewed Always use cold filtered water when preparing Cold Brew coffee Shelf life for Cold Brew concentrate: 7 days refrigerated – should not be left out on counter - Compost Toddy® filter and grounds when complete	Standards - The internal and external parts must be free of coffee oil build-up and odor. - Equipment must be washed, rinsed, sanitized, and then air dried after each use. - Use sanitizing solution to sanitize all food contact surfaces, countertops and store equipment. Best Time to Complete Task - At the end of the day or after use Materials Required - Disinfectant/Sanitizer - Wiping cloths, optional

Starbucks® Cold Brew Powder

Product Overview

This information will provide you general training and operational execution supporting **Cold Brew Powder** for our Cold Brew & Nitro served through our Countertop System in your operation.

What is Starbucks® Cold Brew Powder? Starbucks soluble Cold Brew coffee powder delivers the same great café quality taste as Nitro & Cold Brew served in Starbucks retail stores. Simply add cold, filtered water to powder, mix, pour into dispenser and serve from our Cold Brew + Nitro Countertop System and enjoy.

STARBUCKS® COLD BREW POWDER

Flavor Profile:

100% Arabica, Colombian, Café Practices coffee. The taste profile is smooth, mellow flavor with chocolate notes. Pair with lemon loaf or chocolate croissant.

Shelf Life:

9-month unopened shelf life // **5 days prepared/refrigerated**

Case Pack: 20 – 42 grams pouches per case

STARBUCKS COLD BREW POWDER YIELD

Each 42g Pack: 6 nitro or 9 still 16oz beverages

PREPARING STARBUCKS COLD BREW POWDER: Supplies Needed

Ordered through Solutions Lab

SKU 12421029

1 Gallon Pitcher

Sourced by Operator

Cleaning Equipment: Reference the Daily & Weekly Cleaning Card for complete instructions

Cold Brew Powder can be served outside of our cold brew system. Follow preparation instructions and transfer to 2-liter pitcher and follow the by the cup recipe card for cold brew beverages.

Starbucks® Cold Brew Powder

Steps to Prepare Cold Brew Powder

STEPS	INSTRUCTIONS
1	 Pour 2.5 Liters of cold filtered water into 1-gallon pitcher
2	 Add 1 pouch of Cold Brew Powder to pitcher
3	 Stir with whisk or spoon until product is fully dissolved – approximately 1 minute. Repeat steps 1-3 above and prepare another pouch to fill server. Note: 2 pouches of Cold Brew Powder will equal 1.3 gallons of product and will not completely fill the server. <u>Must refrigerate in pitchers/container for 4 Hours before pouring into server.</u>
4	 After refrigerating in pitcher/container for 4 Hours, pour product into 1.5-gallon green wrapped server. See Daily Set Up & User Guide for preparing the equipment once product has been prepared.

PREPARING COLD BREW POWDER: VOLUME INSTRUCTIONS

Directions above provide quantities to fill one 1.5-gallon server (2 pouches = 1.3 gallons). Operators may choose to prepare more product in advance for high volume locations along with having product available for replenishment. Follow the chart below for high volume preparation.

Pouches	3	4	5	6	7
Cold Filtered Water & Volume	7.5 liters (1.9 gallons)	10 liters (2.6 gallons)	12.5 liters (3.3 gallons)	15 liters (3.9 gallons)	17.5 Liters (4.6 gallons)

Serving Cold Brew & Nitro Cold Brew Coffee from Powder

How is Cold Brew Powder Different from Cold Brew Prepared in a Toddy® Brewer?

Cold brew coffee relies on time vs. heat for extraction, which allows the coffee to develop a naturally sweeter taste with low acidity and creating a smooth, full-bodied experience. Starbucks® Cold Brew Powder takes the steeping time out of preparation and offers a super-smooth Starbucks® Cold Brew coffee. Cold-steeped with our custom blend of coffee, luring out subtly sweet chocolaty notes.

Serving Cold Brew & Nitro Cold Brew with Countertop System

Prepared Cold Brew Powder should be served through our countertop system. This equipment provides the opportunity to offer both Cold Brew and Nitro Cold Brew in your operation. Follow the steps in previous page for preparation requirements before attaching to countertop system to serve.

Preparing Cold Brew Coffee by the cup

1. Make sure switch is turned to "Cold Brew"
2. Select 12-16-24oz cold cups
3. Pour Cold Brew from countertop draft system to top line on cup
4. Fill with ice to top of cup
5. Place strawless lid on cup and serve

Preparing Nitro Cold Brew Coffee by the cup

1. First make sure switch is turned to "Nitro"
2. Select 12-16oz cold cups*
3. Hold cup at an angle under dispenser, pull down tap handle all the way and begin to fill cup
4. Once cup is filled halfway, straighten cup and place on drip tray
5. Fill to ¼" from rim, straighten tap handle to stop pouring
6. Place nitro lid on cup and serve

*** Nitro Cold Brew is not approved to be served in 24oz (venti) cups**

Starbucks Nitro & Cold Brew Countertop System

Cold Brew & Nitro Cold Brew with Countertop System

- A compact, Cold Brew and Nitro Cold Brew dispenser unit that provides a streamlined design and requires minimal counter space.
- Allows users to select their beverage of choice – Nitro Cold Brew or Classic Cold Brew - with the simple turn of a knob.
- Dispenses Nitro Cold brew with velvety smooth microfoam and a cascade with a rich, golden color without the need of an external nitrogen gas tank.
- The cold brew product storage server can be placed next to the unit or undercounter (within 5 feet)
- Utilizes a standard 120-volt outlet. No water or drainage hookup needed.

Cold Brew & Nitro Cold Brew with Countertop System Daily Set-Up

Follow the directions on the Daily Set Up & User Guide for complete instructions on daily set-up checklist.

- Ensure that the unit is plugged in
 - If unplugged, allow unit to chill for approx. 10minutes
- Ensure that the intake hose is properly attached to the back of the unit
- Turn on the system pressure pump using the switch on the back of the unit
- Connect the intake hose to a server filled with Pre-chilled SBUX Cold Brew
- Turn selection knob to NITRO COLD BREW
- Dispense product into a cup for approx. 30 seconds.
- Dispose of product and cup

Cold Brew & Nitro Cold Brew with Countertop System Daily Cleaning

Follow the directions on the Daily & Weekly Cleaning Guide for complete instructions

Daily:

- Disconnect server from intake hose – if product leftover in server, place in refrigerator (if past posted shelf life, dispose of product)
- If serve is empty, clean as directed
- Perform a rinse of countertop system's beverage lines
- Turn off system pressure at back of unit.

Weekly:

- Follow above directions, plus Rinse Intake Filter, Rinse Dispense Nozzle, Sanitize Beverage Lines

Preparing Cold Brew Coffee from Concentrate

How is Cold Brew from Concentrate Different from Cold Brew Prepared in a Toddy® Brewer?

Cold brew coffee relies on time vs. heat for extraction, which allows the coffee to develop a naturally sweeter taste with low acidity and creating a smooth, full bodied experience. Starbucks® Cold Brew from Concentrate takes the steeping time out of preparation and offers a super-smooth Starbucks® Cold Brew coffee. Cold-steeped with our custom blend of coffee, luring out subtly sweet chocolaty notes.

Approved Product & Supplies

**Starbucks® Cold
Brew Concentrate**

**2 Liter Pitcher
and Orange Lid
for preparation**

Cold Brew Concentrate Preparation by the Pitcher

1. Empty one container cold brew concentrate into 2 liter pitcher
2. Add one liter filtered cold water

*** Shelf Life: 14 days refrigerated**

*** Approximately six 16oz beverages per 2 liter pitcher**

Preparing Cold Brew Coffee by the cup

1. Select 12-16-24oz cold cups
2. Pour Cold Brew from pitcher to top line on cold cup
3. Fill with ice to top of cup
4. Place lid on cup and serve

NOTE: Cold Brew Coffee by the cup should always be prepared from 2 liter pitcher, not from Cold Brew Concentrate container.

Refreshers® Beverages

A whole new way to experience coffee

What you'll need for this module:

- Starbucks Refreshers® Product Card
- Starbucks Refreshers® Recipe

What you'll learn in this module:

- Starbucks Refreshers® Overview
- Starbucks Refreshers® Beverages
- How to Prepare Starbucks Refreshers® Beverages

Starbucks Refreshers® Overview

Starbucks has brought customers a whole new way to experience coffee. Starbucks Refreshers® beverages are made with real fruit juice and are lightly caffeinated with Green Coffee Extract. The perfect afternoon pick-me-up.

What is Green Coffee Extract? Well, all coffee starts as a green bean. Traditionally, after coffee is harvested, those beans are roasted to bring out the dark colors and bold flavors coffee is famous for. Now Starbucks is using an innovative process to pull the naturally occurring caffeine from coffee beans before they're roasted. That's Green Coffee Extract: the caffeine from coffee, with none of the roasty coffee flavor.

Featured Beverages

Strawberry Acai

Sweet strawberry flavors are accented by passion fruit & acai notes and lightly caffeinated with Green Coffee Extract.

Mango Dragonfruit

This tropical-inspired pick-me-up is crafted with a refreshing combination of sweet mango and dragonfruit flavors is hand-shaken with ice and a scoop of real diced dragonfruit.

Pineapple Passionfruit

Tropical flavors of pineapple & passionfruit shaken with real diced pineapple pieces & ice to create a delicious island escape.

Beverage Options

Refreshers can be customized with either water or lemonade as indicated in the recipe cards.

Pink Drink, Paradise Drink and Dragon Drink can be customized by adding Starbucks Coconutmilk.

Locations will want to make sure they have Starbucks Lemonade and Starbucks Coconutmilk on hand to prepare beverages.

Refreshers Requirements & Preparation

Product	Grande Yield (cs)	Open Shelf Life
Strawberry Acai Base	96	72 Hours*
Mango Dragonfruit Base	96	72 Hours*
Pineapple Passionfruit Base	96	72 Hours*
Dried Strawberry Inclusion	132	5 days
Dragonfruit Inclusion	132	5 days
Pineapple Inclusions	132	5 days

**Juice base open shelf – ambient at cold beverage station or refrigerated*

Refreshers® Juice Base Preparation

Refreshers® juice base requires preparation prior to preparing handcrafted beverages. Juice base is mixed with filtered water and stored at the cold beverage station.

Place appropriate color lid on pitcher, mark with shelf life and store at cold beverage station

Follow recipe in beverage manual for beverage prep instructions

72 hr* Shelf Life

Smallwares Support

* Shelf life is ambient or refrigerated

Additional smallwares are needed to successfully execute Starbucks Refreshers® Beverages at your location.

Smallwares
Dry Inclusion Tower 1-2/ea
Dry Inclusion Dispenser (DID) 3/ea
Black Plastic Spoon – 3/ea
Iced Bev Shaker (used to build beverages)

Smallwares
Juice Base Lids - 3/ea
2 Liter Pitcher for Juice lids – 3/ea*
Riser – optional, saves space at cold bev station

*When cleaning 2 liter pitcher for Pineapple Juice Base, be sure to use dish scrubbing brush and clean soapy water. Pineapple juice base may stain pitcher.

Preparing Starbucks Refreshers® Beverage

Always follow complete recipe in WPS Starbucks® Beverage Resource Manual. All Refreshers beverages are build the same way in the Iced Beverage Shaker

1. Add liquid base to appropriate **Tea line**
2. Add water, coconutmilk or lemonade to appropriate **Water/Juice line**
3. Add **one level scoop** to fruit inclusion
4. Fill with ice-to-**Ice line**
5. Put lid on shaker and shake vigorously **10 times**.
6. Pour contents into cup and top with flat lid.
7. Hand off with appropriate straw.

Notes & Questions

Cold Foam Modifier

Frothy and decadent beverage topper .

What you'll need for this module:

- Cold Foam Product Card
- Cold Foam Recipe Cards

What you'll learn in this module:

- Cold Foam Overview
- Equipment & Smallwares needed for Cold Foam
- Cold Foam Beverages
- Preparing Cold Foam by the cup

Cold Foam

Starbucks® Cold Foam makes it possible for Operators to create greater Consumer personalization and increase the overall number of beverage options available in their cold coffee program – especially Cold Brew. Now available to We Proudly Serve Starbucks® locations.

What is Cold Foam?

Cold Foam is milk that's frothed without heat or steam.

Cold Foam is a differentiator for Cold Brew - it offers layers of texture and flavor, offering cold brew drinker a special, creamy, slightly sweet experience.

Cold Foam Beverage Options

Cold Foam as a Modifier

Add Cold Foam to any iced beverage. Cold Brew & Iced Americano are customer favorites

Cold Brew with Cold Foam

Cold Brew topped with a Cold Foam to create a refreshing beverage

Salted Caramel Cream Cold Brew

Savory-meets-sweet refreshing beverage certain to delight: our signature, super-smooth cold brew, sweetened with a touch of caramel and topped with a salted, rich cold foam

Additional Beverage Modifications for Cold Foam

Vanilla Sweet Cream is needed to prepare these beverages:

- Vanilla Sweet Cream Cold Foam modifier
- Salted Caramel Cream Cold Brew
- Pumpkin Cream Cold Brew – Fall LTO
- Irish Ceram Cold Brew – Holiday LTO

Review Beverage Recipe Cards for complete instructions preparing Vanilla Sweet Cream and handcrafted recipes.

Cold Foam

Preparing Vanilla Sweet Cream

Cold Foam can be prepared two ways – with non-fat milk or with Vanilla Sweet Cream. Many of the flavored and limited-time-offering cold foam beverage use Vanilla Sweet Cream as the base for cold foam.

Below is the recipe for preparing Vanilla Sweet Cream

We recommend using the 1 liter carafe to prepare Vanilla Sweet Cream in a larger batch to ensure you have enough on hand at all times for customer orders.

Yield:	3-5 Grande Beverages	5-10 Grande Beverages	10-18 Grande Beverages
Fontana® Vanilla Syrup	4 pumps (1 fl. oz.)	8 pumps (2 fl. oz.)	13 pumps (3.25 fl. oz.)
*Heavy or Whipping Cream	2.5 fl. oz.	5.5 fl. oz.	9 fl. oz.
2% Milk	1.5 fl. oz.	3.5 fl. oz.	5.5 fl. oz.

*Half & Half is not an approved substitute for Heavy or Whipping Cream

Preparation

1. Add all ingredients into carafe or other container with lid.
2. Invert at least twice to mix well.
3. Label with shelf life: 24 hours
4. Store in refrigerator and refrigerate after each use

Cold Foam

Supplies Needed for Cold Foam

You will need a special pitcher for the Vitamix blender to prepare cold foam.

Cold Foam Blender Pitcher

This blender pitcher is different from Vitamix Frappuccino® blender pitchers. The size and blade are different. This is the only approved pitcher to use to prepare Cold Foam for WPS Starbucks iced beverages.

Cold Foam pitchers are smaller and have a circular disk blade.

Vitamix Blender

Ensure your Vitamix Blender is programmed for Cold Foam – here's how you can tell:

NEWER VITAMIX BLENDER (2018 to present)

Black base

Buttons 3 & 4 are programmed for Cold Foam

This blender is ready to prepare Cold Foam.

OLDER VITAMIX BLENDER (older than 2017)

Tan base

Buttons 3 & 4 are NOT programmed for Cold Foam

For more information on updating your blender, please contact your Solutions Lab Representative

Steps to Prepare Cold Foam Layer Build

Non-fat milk is the default for preparing standard Cold Foam as a modifier

Step	Instructions
1	Pour 100 ml (same quantity for all sizes) of non-fat milk or prepared cream* as listed on Beverage Recipe Card or customer order, into Cold Foam blender pitcher *Best Practice: To ensure quality Cold Foam, always use cold milk and ensure pitcher does not have excess water in it.
2	Add 2 pumps of specific syrup, per Beverage Recipe Card or customer order
3	Push button #3
4	Prepare beverage as requested per Beverage Recipe Card Pour contents of the pitcher over top of beverage. Rinse Cold Foam Pitcher after each use and ensure pitcher is free of water before next use

Teavana® Tea

Expertly blended to create bold, layered flavors

Tools for this module:

- Teavana® Hot Tea Filterbag Product Card
- Teavana® Iced Tea Product Card

What you'll learn in this section:

- History of Teavana® Tea
- Tea Types
- Teavana® Hot, Iced and Tea Latte Assortment
- Preparing Teavana® Teas – Hot, Latte, Iced

Click icon to watch Teavana Hot Beverage Basics

History of Teavana® Tea

Tea has always been part of the Starbucks heritage. We scooped loose-leaf teas in our first Starbucks® store at Pike Place Market. The new Teavana® Tea assortment is a major step forward in doing for tea what we at Starbucks did for coffee over 40 years ago. Teavana® brings many new teas sourced from top tea estates and botanical producers and delivers vibrant, new flavors.

- Expertly blended botanicals to create bold, layered flavors
- Premium quality tea blends with no artificial ingredients
- Continuous category-leading innovation pipeline across hot and iced portfolio
- Only tea brand that delivers impactful alignment to Starbucks retail cafes around the world, offering your customers the chance to enjoy the tea they already love

What is tea?

Tea is the dried leaf of the perennial evergreen shrub, *Camellia sinensis*, which grows in a variety of climates around the world. Farmers prune and cut back tea bushes to grow more side branches, but left untended, tea bushes have been known to grow to 40–60 feet high. Because of constant plucking, a flat surface at the top of the bush is created. This surface is known as the plucking table.

Tea Types & Fundamentals

Types of Tea

There are 4 major tea types, which, in order of oxidation levels are: white, green, oolong (not currently available), and black. We serve 3 of the 4 teas at Starbucks, Herbals are served in Starbucks but it is not technically a tea type.

Black Tea:

Black tea is a fully oxidized tea. The process of making black tea involves withering then rolling the tea leaves followed by a long period of oxidation. Then the black tea leaves are fired resulting in a complex aroma with a full body and strong flavor.

Green Tea:

Green tea has been consumed in Asia for centuries. Produced primarily in China and Japan, tea leaves are picked, dried, and roasted or steamed to stop oxidation. Chinese green teas are typically roasted in a hot pan whereas Japanese green teas are usually steamed. After moisture is removed, the tea leaves are rolled and dried again.

White Tea:

White tea, like other tea types, comes from the *Camellia sinensis* plant, specifically the tea buds and youngest tea leaves of this plant. It is the least processed of all teas—the tea leaves are simply steamed and then dried. White tea has a light color and delicate flavor.

Herbal Infusions:

Herbal infusions are not actually produced from *Camellia sinensis* tea leaves like white, green, oolong and black teas. Herbal infusions are flavorful combinations of dried fruit, herbs, spices, roots and flowers.

Fundamentals of Tea

The first step in creating a good cup of tea is to start with high-quality tea. Teavana® has done this part of the work for customers. Use the following instructions, and you will help tea enthusiasts and tea novices discover the wonders of Teavana®.

Water

The water you use to steep tea should be free of impurities and taste clean and fresh. If the water tastes good, it will make good tea. Avoid water from water softeners, distilled water, municipal water that tastes like chlorine, well water that tastes or smells like iron or sulfur, or any other water with a strong taste of its own. Otherwise, consider using filtered or bottled water.

62

Temperature

Cups of tea served in Starbucks stores are made with water dispensed from a coffee-brewing system, which is approximately 175°F–198°F.

Proportion

Using the correct amount of tea is fundamental to achieving the best results. Our Teavana® Filterbag teas are perfectly proportioned for 8 fl. oz. of water.

Teavana® Hot Tea Filterbags

Teavana® offers hot, iced and tea lattes in a variety of flavors and formats to meet the needs of your customers. The following pages provide an overview of each tea offering.

Hot Filterbag Tea Lineup

Our teas are organized and color-coded on packaging into different tea types: Black, Green and Herbal.

Black Teas Black teas have been allowed to fully oxidize and develop complex character that will vary from region to region. Caffeine Level – 40 mg ● ● ● ●	English Breakfast	Classic with light honey notes.
	Modern Earl Grey	Black tea with bergamot citrus and a hint of lavender.
	Classic Chai	Black tea with cinnamon and cardamom spice.
Green Teas Pure green tea has a lively taste that is often described as vegetative. Green tea is less brisk than black tea and is slightly sweet and creamy Caffeine Level – 1-15 mg: ● ○ ○ ○	Jasmine Citrus	Jasmine-scented green tea and citrus.
	Radiant Green	Pan-fi red green tea with subtle roasty notes.
	Ginger Peach	Green tea with ginger and peach notes.
Herbal Infusions (caffeine-free) A complex combination of flowers, leaves, fruit peels, exotic spices and other caffeine-free ingredients. Caffeine Level – 0 mg ○ ○ ○ ○	Chamomile Blush	Citrusy spearmint with floral undertones.
	Harmonic Mint	Pacific Northwest spearmint and peppermint with lemon verbena.
	Hibiscus Spice	Hibiscus with apple and a hint of cinnamon.

Teavana® Iced Tea & Tea Latte

Shaken Iced Teas

Because it has a much lighter mouthfeel than coffee, tea can be overwhelmed by many of the rich foods that taste great with coffee. Look for lighter-flavored foods and complementary flavors when searching for a good pairing. In general, more neutral flavors work better with tea. Experiment with food like biscotti, shortbread cookies and any food that contains fruit or fruit flavors. Iced versions of Teavana® teas pair well with sandwiches, chips and other savory foods.

Teavana® Iced Tea Lineup

Black Tea	Premium black tea.
Green Tea	Green tea is blended with mint, lemongrass and lemon verbena.
Herbal Tea	Our blend of hibiscus, lemongrass and apple. Caffeine-free.

Teavana® Tea Lattes - Chai

A rich blend of teas and spices in the style of the hill dwellers of the Himalayas. Black tea from India is blended with ginger, cinnamon, black pepper, cardamom, cloves and star anise.

- Teavana® Chai is a blend of rich and full-bodied Assam teas, layered with exotic spices from around the world. The malt and astringency of the black tea is complemented by the lingering sweetness of cinnamon and tangy spice of ginger root. The warmth of cardamom is offset by the unique flavor of star anise and cloves, all finished with the heat of black peppercorns.
- Teavana® Tea Lattes are delicious served hot or iced, with or without dairy and sweetener.

Chai Tea Lattes – Preparation for Hot & Iced

Chai tea latte is great both hot and iced. Basic recipe preparation is always going to be a 50/50 ratio of milk to chai and exact proportion is based on cup size you're preparing. Review specific recipes available in your Beverage Manual for the complete measurements for each beverage size.

Preparing Hot, Iced and Tea Lattes

Hot Tea Filterbags

Steeping Time

Tea quality declines if the tea is not given enough time to steep, and the result is weak tea. There's a belief in the tea industry that the average person using a tea bag allows about 30 seconds of steeping time. This is enough time to get a little color into the cup but not much flavor or character. As with other aspects of tea, the mix of traditions and cultures leads to a confusing array of methods and preferences for steeping time.

Filterbag rack holds multiple boxes of tea and can be displayed on the back or front counter.

Preparing Hot Tea Filterbags:

1. When Teavana® tea is ordered, allow your customer to select from your offerings of black, green and herbal options
2. Once the selection is made, ask your customer what size they would enjoy. Teavana® recommends that all teas are served with cup sleeve vs. double-cupping
3. Place the appropriate amount of tea bags in the cup and tuck the tea label(s) into the cup sleeve. Fill cup with appropriate amount of hot water (water temp should be 175-198° F)

8oz	12oz	16oz	20oz
1 bag	1 bag	2 bags	2 bags

4. When you present cup of tea to customer, let them know recommended steeping time – this is based off of type of tea they've ordered
 - **Green teas = 3 minutes**
 - **Black and herbal teas = 5 minutes**

Preparing Hot, Iced and Tea Lattes

Shaken Iced Tea

Teavana® Shaken Iced Teas provide customer a refreshing option for their favorite blend of iced tea. Iced teas can be served sweetened with Starbucks Liquid Cane Sugar syrup or with lemonade and shaken in our tea shaker and served over ice for your customers.

		Description	Brew Time	2 Liter Pitcher Lid Color
Brewed Iced Tea	Teavana® Iced Black Tea	Premium black tea.	5 minutes	Rust
	Teavana® Iced Green Tea	Green tea is blended with mint, lemongrass and lemon verbena.	3 minutes	Green
	Teavana® Iced Passion Tango® Tea	Our blend of hibiscus, lemongrass and apple. Caffeine-free.	5 minutes	Pink
	Filtered Water			Grey

Brewing Teavana® 1 Gallon Iced Tea

Follow these steps to prepare all blends of iced tea. It is important that all 1 gallon tea for Shaken Iced Teas follow these steps below. Using double-strength tea aligns with recipe builds with all handcrafted recipes and using the iced tea shaker.

Quality Tips: Brewed Iced Tea:

Supplies needed:

- 2 Liter Pitcher
- Filter Pack Tea
- Tongs

- Dispose of unused iced tea at the end of service day.
- Do not refrigerate: Iced tea has a **12-hour shelf life** at room temperature.
- Use day dots to mark expiration time.
- Ensure you're using the corresponding-colored pitcher lid for each iced tea type you're serving. This provides your key visuals when preparing iced tea beverages

Steps:

1	2	3	4	5	6
					
Place 1-gallon filter pack in a clean 2 liter pitcher.	Add 1 liter of hot filtered water and set timer to steep - (<i>green teas = 3 min, black and herbal teas = 5 min</i>)	Using tongs, squeeze filter pack to remove excess brewed tea and remove filter pack from pitcher.	Add 1 venti scoop of ice.	Fill to 2-liter mark with cold filtered water	Place appropriate lid and label pitcher with shelf life. Store unrefrigerated at cold beverage station

Yield = 2 Liters

TEA

- Starbucks® Matcha Preparation

Starbucks® Matcha Beverages

What is Matcha?

The smooth, subtle taste of Starbucks® Matcha has made it a favorite at Starbucks retail stores, delivering trend-driven growth recently. Adding Starbucks® Matcha beverages brings the green to your We Proudly Serve Starbucks® espresso menu by delivering the great taste consumers love in a variety of ways, from light, refreshing sips to rich, creamy treats.

Starbucks® Matcha is perfect for operators serving Millennial and/or Gen Z customers, it offers an on-trend extension to both tea and Frappuccino® blended beverage offerings while delivering meaningful differentiation your customers are looking for.

What is Matcha?

*Finely ground
green tea
leaves.*

Starbucks® Matcha Beverage Options

Matcha Green Tea Latte (Hot & Iced)

Sweetened, shade grown, finely ground matcha green tea, handcrafted with steamed milk.

Matcha Green Tea Frappuccino® Blended Beverage

Sweetened shade-grown, finely ground matcha green tea and Classic syrup, blended with milk and ice and topped with whipped cream.

Shaken Matcha Lemonade

Finely ground matcha green tea combined with lemonade.

69

BEVERAGE COMPONENT	OPEN SHELF LIFE
Matcha Powder	7 days in dry inclusion dispenser.

Preparing Starbucks® Matcha Beverages

What you'll need to prepare Starbucks® Matcha

Product	Storage	Preparation
		
Starbucks® Matcha Powder	Dry Inclusion Dispenser	Shaker for Handcrafted Iced Beverages
	Matcha Powder Label	
	Scoop 1-tsp 8" Handle	

Preparing Starbucks® Matcha Beverages

Matcha can be prepared hot, shaken or blended. Review specific recipes available in your Beverage Manual for the complete measurements for each beverage size.

Hot Matcha Green Tea Latte

Hot Green Tea Lattes are made by combining the Starbucks® Matcha Powder with milk in the steaming pitcher and steaming it as you would an espresso based latte.

Shaken Matcha Beverages

Iced Matcha Beverages are prepared in the Handcrafted Beverage Shaker. Matcha is added to ice and shaken with milk for an Iced Matcha Green Tea Latte, lemonade and water for a Shaken Matcha Lemonade, and water for a Matcha Water.

Blended Matcha

The Matcha Green Tea Frappuccino® Blended Beverage is prepared by blending milk, Matcha Powder, Classic Syrup and Frappuccino® Crème Base with ice and topped with Whipped Cream.

Fontana[®] Blended Beverages

Rich, creamy, fruity and delicious

What you'll need for this module:

- Fontana[®] Beverage Base Product Card

What you'll learn in this module:

- Fontana[®] Beverage Base overview and standards
- How to make Fontana[®] Beverage Base beverages

Fontana® Beverage Bases

Fontana® Beverage Base Overview

These beverage bases provide variety for blended beverage offerings in your operation. They are rich, creamy, fruity and delicious to cover all options your customer may be looking for.

- Latte—made with 100% *arabica* coffee and provide a great blended coffee alternative
- Strawberry & Mango—made with real fruit puree and provide a great smoothie, non-coffee refreshment and treat
- All flavors are easily customizable using other Fontana® syrup and sauce options
- Flavors come in a 63 oz. bottle with pumps included. Pumps should be discarded once container is empty; they are not re-usable. Only blue pumps should be used in Fontana Beverage Bases.

Each bottle makes approximately 15 Grande blended beverages. May vary depending on proportion per beverage.

Product	Shelf Life
Latte, Strawberry & Mango	14 days opened, unrefrigerated

How to Make Fontana® Beverage Base Beverages

To make basic Latte, Strawberry and Mango beverages, all you need are three basic ingredients. Use Fontana Latte Base and Fontana Bittersweet Chocolate Sauce to make Mocha Blended.

- Fontana® Beverage Base of choice
- Ice
- Water or dairy – depends on flavor and recipe
- Customizing flavors with fruit, yogurt, tea and other Fontana® syrups are also options and you can view recipe options at nestlecoffeepartnerssl.com.

Standard Recipe Ratio

Ingredients	12 oz.	16 oz.	24 oz.
Ice	Full 12 oz. cup	Full 16 oz. cup	Full 24 oz. cup
Fontana® Beverage Base	3 pumps	4 pumps	6 pumps
Dairy/Water*	1-3 oz. depending on size - follow recipe		

*Amount of dairy or water needed per drink size will vary and depends upon ice type.

Mocha Blended Beverage

Ingredients	12 oz.	16 oz.	24 oz.
Ice	Full 12 oz. cup	Full 16 oz. cup	Full 24 oz. cup
Fontana® Latte Base	3 pumps	4 pumps	6 pumps
Fontana Bittersweet Chocolate Sauce	2 pumps	3 pumps	4 pumps
Dairy/Water*	1-3 oz depending on size – follow recipe		

Activity

Activity #1: Preparing Fontana® Blended Beverages

Depending on flavors you are offering in your operation you should practice making one of each flavor.

Explore the different recipe options available for Fontana® Beverage Bases available on nestlecoffeepartnerssl.com or recipes available in your WPS Beverage Manual.

- Prepare selected beverage based on recipe ingredients and correct proportions.
- Describe the various flavors you taste for each beverage—are they fruity, creamy, indulgent, and refreshing? Tasting and being able to describe beverages will help you better explain when customers have questions.

Notes & Questions:
